Last Updated Tue Jan 03 2012

# Table of Contents

Global Recommendations	3
Home Screen	4
Word Screen	5
Definition Screen (1/2)	6
Definition Screen (2/2)	7

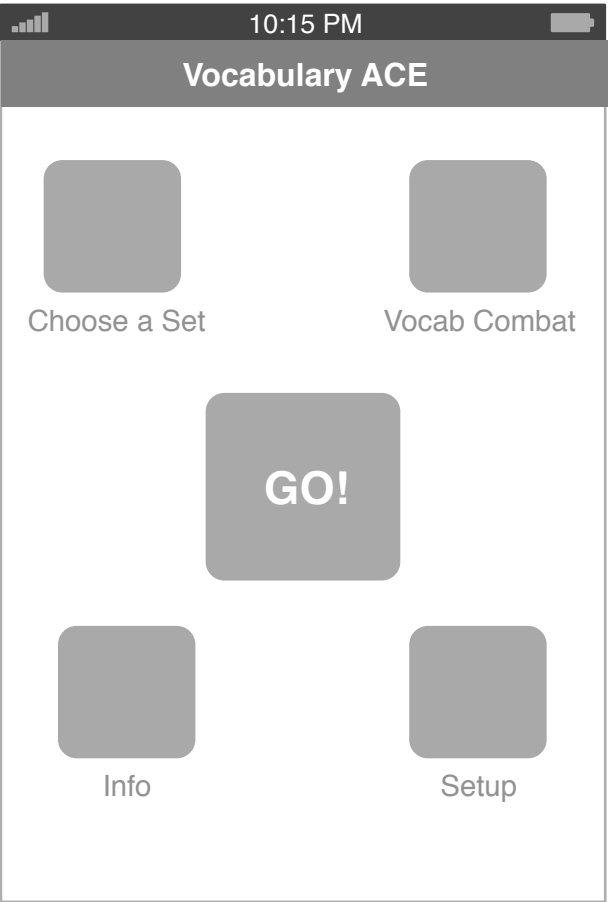

## Global Recommendations

- Provide title/navigation bar
- Do not use blinking text or marquees
- Do not stretch icons
- Repeating actions is not necessary (i.e. you don't need the "Definition" button because tapping on the word already does that)
- Be consistent with the Home button (always appear in top left area), and call it "Home" rather than "Main Screen"
- Bold text only when necessary
- Limit "info" dialogs - use only when necessary
- Request for visual feedback from a visual designer (regarding colors, fonts, backgrounds, etc.)

Recommendations:

Get rid of the "Thank You" button. Your "thank you" statements can appear in the Info section.

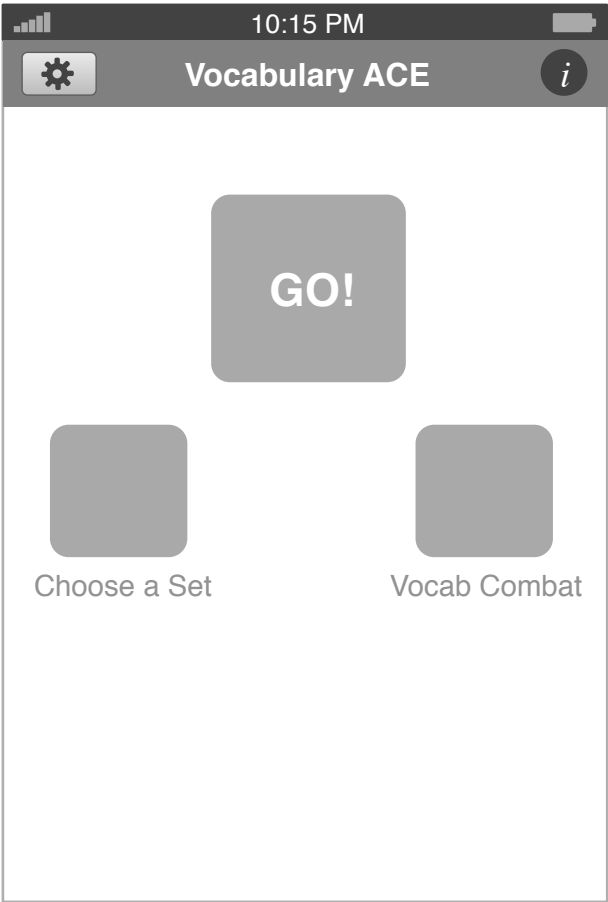

Option 1  
Grid Style

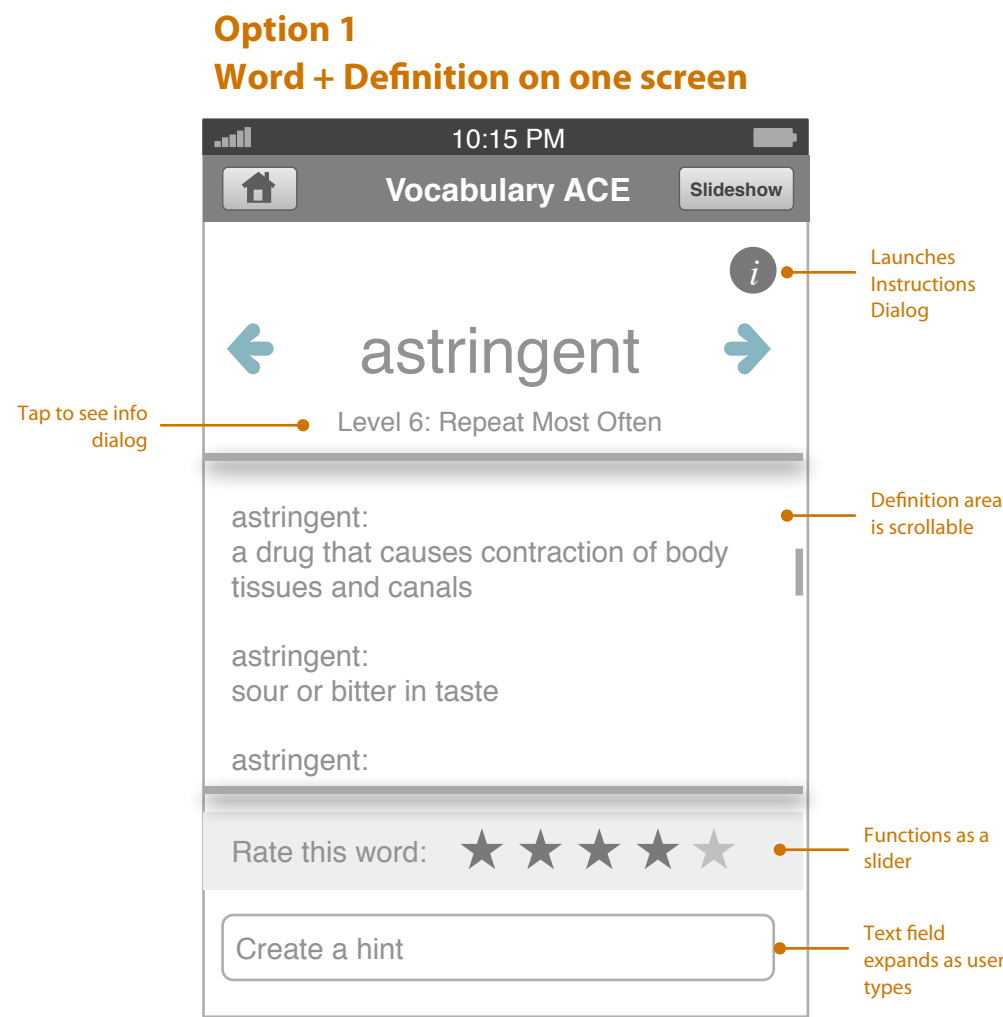

Option 2  
Table Style

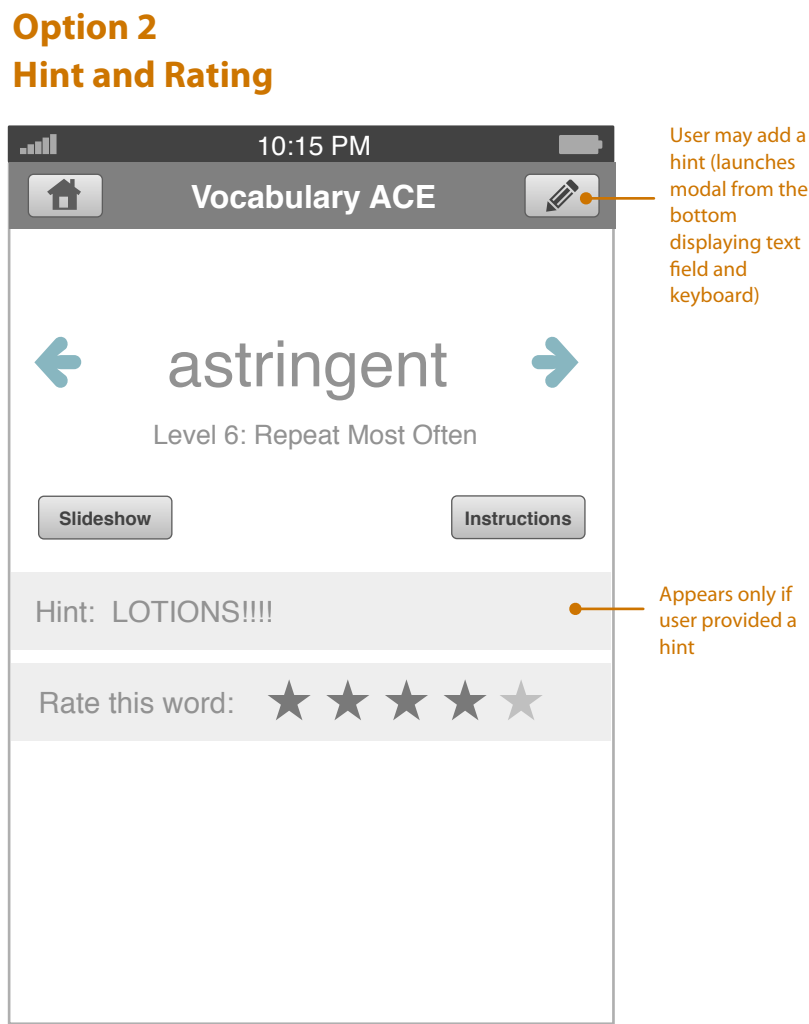

Option 3  
Info and Setup in Title Bar

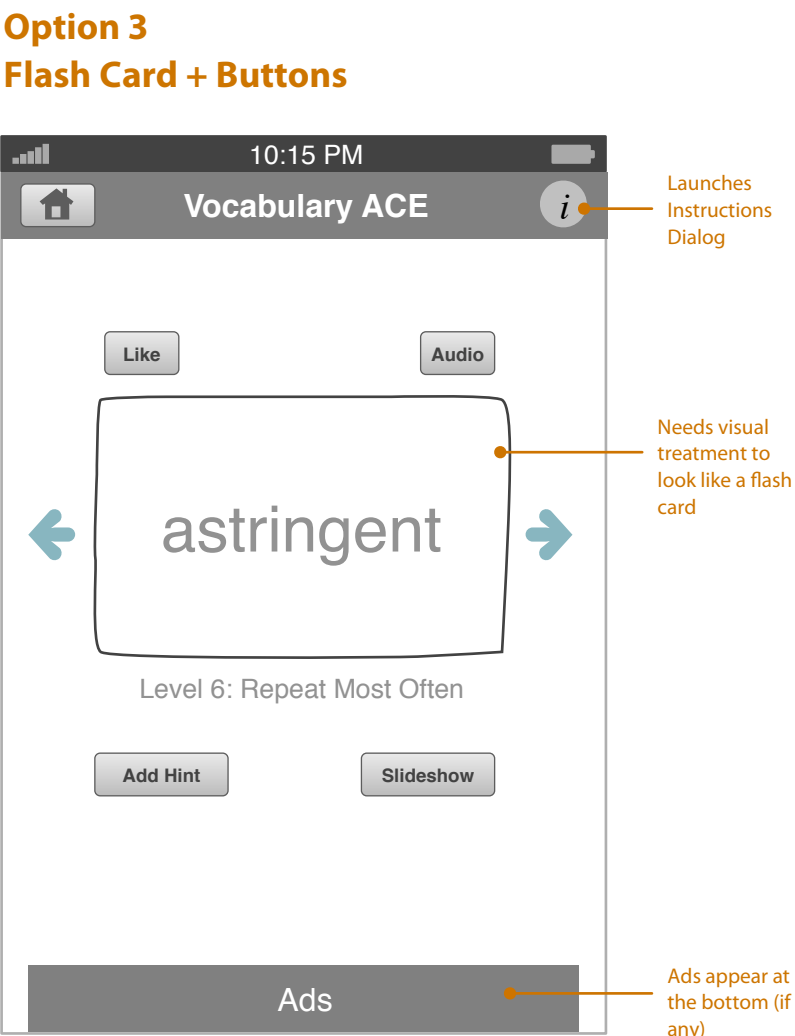

**Recommendations:**  
Get rid of the "New Word" button because user can swipe left/right or tap previous/next to get a new word.

Definition appears on the same screen instead of a separate screen.

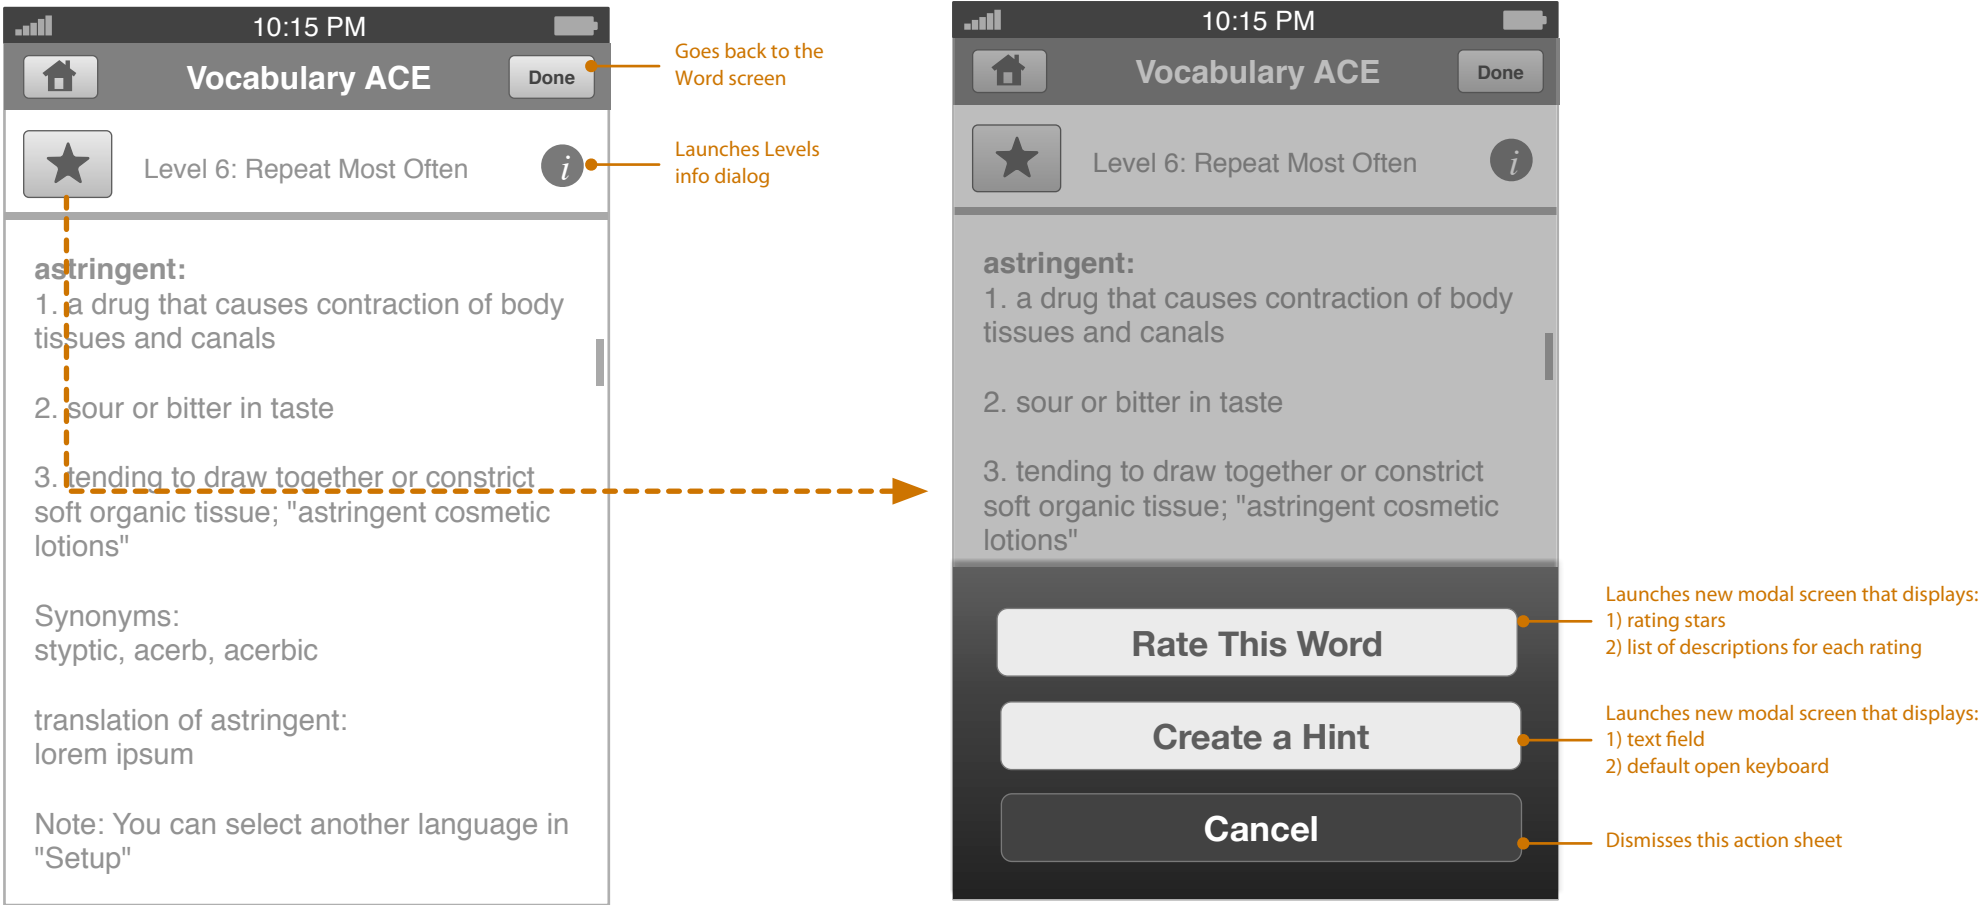

If a hint was provided by the user on the definition screen, the hint would appear on this screen.

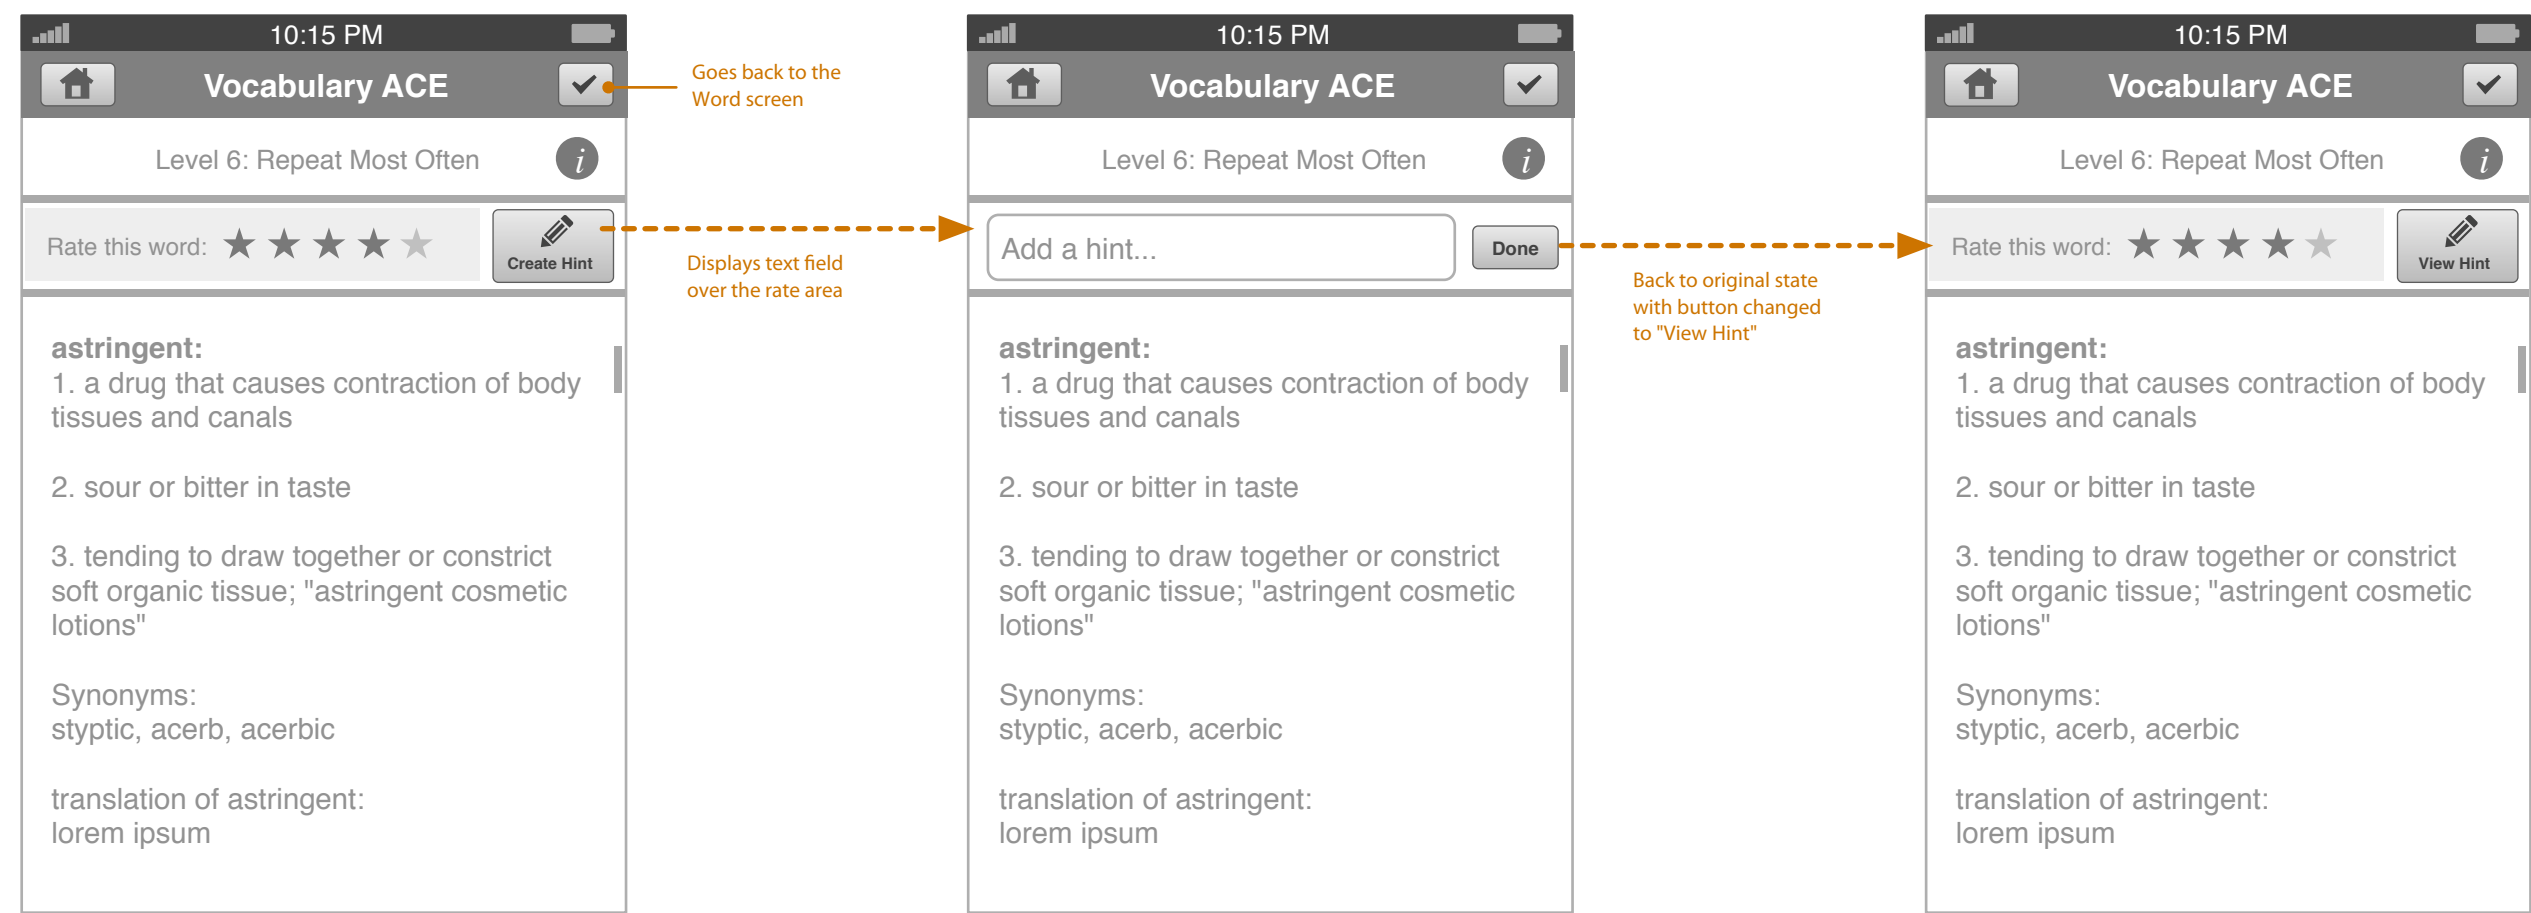

Rating functionality appears in the definition screen.

Option 1  
One button launches action sheet

Tapping on star button displays the action sheet with buttons to select.

Option 2  
Rate and Hint in same line

Rate and Hint appear in the same line.

Tapping "Hint" displays text field over the Rate area.

Text field expands as user types.

Tapping done displays the original state with button changed to "View Hint."

Tapping "View Hint" displays the text field with the user's inputted text so user may edit at any time.
